## ANNEXURE H

### SAMPLE LETTER TO PARENTS WITH REGARD TO THE ADMINISTRATION OF SHORT/LONG-TERM MEDICATION

Dear Parent/Carer

I would like to seek your assistance in establishing a process for managing the administration of medication to learners when they are in the school's care. Except in an extreme emergency, such as unexpected anaphylaxis, medication may be administered by school staff only if appropriate documentation has been completed by parents/carers. This applies to both prescribed and non-prescribed medication.

#### **Short-term use of medication (up to two weeks)**

For the administration of **short-term** medication, such as a course of antibiotics, our school requires written authority from parents/carers. This authority can be provided by completing an **Administration of Medication form**. These forms can be obtained from the (registrar, form teacher, class teacher) or downloaded from the school's website. **Forms can also be posted out on request (phone .....**).

Alternatively, parents/carers may complete the attached form.

#### **Note:**

- The medication must be clearly labelled with the child's name, and provided to the school in the pharmacy or manufacturer's packaging.
- A certified copy of the doctor's prescription must accompany the medication.
- Documentation must be signed and dated by a parent or carer, and provided to the school with the medication.

#### **Long-term use of medication**

#### **ADMINISTRATION OF MEDICATION**

If you require the school to administer medication to your child for a period of more than two weeks, you may need to complete a *Learner Health Care Summary* for your child's particular health needs if you have not already done so. In most instances, this documentation would have been completed when you enrolled your child or as part of the school's process of updating learner health care records. If this is not the case, please discuss the matter with the principal.

Thank you for your help.

Yours sincerely

PRINCIPAL

## ANNEXURE I

### ***Standard precautions for staff dealing with blood or body fluids***

To minimise the risk of acquiring blood-borne viruses and other infections, the standard precautions to be adopted are as follows:

- When appropriate, encourage children, young people and adults to perform their own first aid if they are capable. Depending upon the severity of the injury and the age of the injured, supervision during this procedure may be necessary.
- Wash hands thoroughly (at least 15 seconds) with soap and water before and after any procedure involving first aid and after cleaning/removing blood and body fluids from any surfaces. Encourage learners or others who have come into contact with blood or body fluids to do the same.
- Always use the recommended protective equipment (e.g. gloves, safety goggles) as necessary to prevent skin and mucous-membrane exposure (e.g. eyes) when contact with blood or body fluids is anticipated. Wear eye or face mask protection when conducting procedures that may result in the generation of droplets or the splashing of blood or body fluids.
- Wear gloves wherever there is a potential risk of exposure to a blood-borne virus or when performing first aid on a bleeding casualty, and wash hands with soap and water after removing the gloves (ensure a readily available supply of gloves). An alcohol-based hand rub may be used when hand-washing facilities are limited or unavailable, but every effort must be made to wash hands with soap and water as soon as practicable.
- Cover cuts and abrasions with waterproof dressings, and wash any blood or body fluids from skin surfaces using soap and water. Soap and water are predominantly recommended for cleaning. Soap is a better wetting agent and cleans more thoroughly than hypochlorite (commonly found in household bleach), overuse of which is not recommended. Viruses do not live on dry surfaces; therefore, drying with a paper towel is recommended.
- If staff or learners are exposed to blood splashes onto a broken skin surface or mucous membrane, wash the area with soap and water, and report the matter to the principal or line manager. Seek medical attention.

- Use standard cleaning equipment (mop, bucket and disposable cloth with detergent and water) for cleaning up spills of blood or body fluids. Wipe the area with a paper towel, and allow the surface to dry. If the soiled surface is porous and difficult to clean, a solution of 0,5% sodium hypochlorite must be applied after cleaning. Soaking a paper towel in the sodium hypochlorite solution and leaving it in place for 10 minutes may achieve this. A number of household bleaches contain sodium hypochlorite and can be diluted to the required strength. Gloves must be worn.
- Seal soiled cloths, paper towels, gloves and dressings in a strong plastic bag before disposal into the domestic garbage.
- Clothing contaminated with blood or body fluids should be removed as soon as practicable and contaminated items placed in a sealed bag until laundered.
- Care must be taken if sharp objects are removed from the environment. Dispose of all sharp objects in a puncture-resistant container.
